

Anzac

2550 *Dot Matrix printer*

The Anzac 2550 is a heavy duty workhorse printer providing fast, quiet and reliable performance in an IBM Mid Range Systems environment. Running at an average of 300 lines per minute and designed to handle very thick forms, the Anzac 2550 is the perfect replacement for lower to mid-speed line printers.

Some winning features in more detail:

Crisp impressions on 8 part forms.

The 2550 print head is constructed from a revolutionary new high strength steel, delivering an impact pressure of 10 tons per square inch. This printer can leave a crisp impression on sheet aluminum -- or the last page of 8-part forms -- for the life of the printhead.

Fast enough to be a line printer.

The Anzac 2550 averages 300 line per minute print speeds by combining 550 character per second printing with high speed line feeding.

Dual paper paths.

No more manual loading and unloading forms. With two continuous paper paths, changing stationery is as simple as pressing a button to park the current form, and moving a lever to select the alternate paper path.

Bar Codes.

The Anzac 2550 prints sixteen different bar codes, including POSTNET. These are printed using AAPF, Anzac's high level plain text language, which is compatible across Anzac's dot matrix and laser printers. Same command, same result on every single printer.

Automatic paper loading with zero-to-any tear.

Simple as touching a button, and new forms are loaded to the correct top-of-form position every time. Print on the very first line, or select your own special starting position. The Anzac 2550 will remember where the form should be loaded to, and load correctly every single time.

Anzac support and maintenance.

Long known for its outstanding maintenance and support operation, Anzac staff are no further than an 800 call away from solving your problems. Ask around, and don't be surprised at the good things you hear. Anzac is the printer supplier of choice for many of the world's largest companies because of the excellent long term support Anzac provides.
