Anzac

3017-3 Laser *printer*

The Anzac 3017-3 is a direct twinax attachment laser printer for IBM's Mid Range Systems (IBM System 36, 38 and AS/400). It is designed for medium volume, high quality print applications, delivering up to 75,000 pages per month of perfect letter quality printing. Attaching as an IBM 3812-1 printer directly to the IBM Systems via either twisted pair or twinax cabling, the Anzac 3017-3 offers full compatibility with its' IBM equivalent. Further support for POSTNET and bar codes are provided, as well as full support for the major forms overlay packages available to IBM's AS/400 users.

Just a few winning features in more detail:

Simple, reliable operation.
The Anzac 3017-3 is a perfect paper manager. Stationery problems such as paper jams simply do not happen. And with a single consumable cartridge which contains both toner and drum, there is only one consumable component to replace.

True 17 page per minute performance.
The Anzac twinaxial controller, which is up to 300% faster than other alternatives, guarantees a true 17 page per minute performance level even when printing dense 198 column by 66 line reports.

Print quality.
At 600 by 600 dot per inch resolution, the Anzac 3017-3 prints up to 625% more dots per square inch than the IBM 3816. This results in impressively crisp printing, particularly on smaller fonts.

Medium to heavy duty.
Rated at 75,000 pages per month, the Anzac 3017-3 is the perfect choice as a departmental printer for servicing the needs of many users.

Job separation.
The Anzac 3017-3 jogs the output stationery between print jobs. This means that each new report is stacked in the output tray with an offset from the previous print job, simplifying the operator's task of separating reports for distribution.
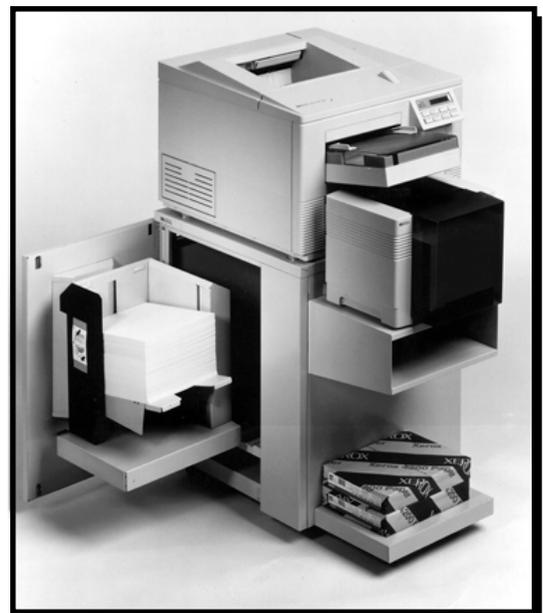

Forms Overlays.
The Anzac 3017-3 supports AS/400 forms design solutions for forms overlays, such as XPoint's Forms Xpress, and ICS's FormSprint.

Duplexing.
The Anzac 3017-3D includes the duplexing option. This allows reports to be printed on both sides of the page, in either book style (side by side) or calendar style (computer stationery orientation). System reports can be compressed down to an 8.5" by 11" page, and with duplexing the number of paper pages can also be halved.

Anzac support and maintenance.
Long known for its outstanding maintenance and support operation, Anzac staff are no further than an 800 call away from solving your problems. Ask around, and don't be surprised at the good things you hear. Anzac is the printer supplier of choice for many of the world's largest companies because of the excellent long term support Anzac provides.
